Hi Kim,

Thank you for your inquiry regarding the landscaping in the contaminated areas. Please find attached the areas referenced as contaminated by ECAN. However, it is important to note that these areas have not been confirmed as contaminated. They are only potentially impacted by activities consistent with the historic residential development in the centre of these zones (i.e., lead based paints, asbestos and rubbish fill).

As per the attached plan, the proposed native planting covers a small portion of the potentially contaminated areas. We expect that the planting will involve small hand dug excavations and will not involve any recontouring of the existing landforms or major soil disturbance. As such, soil disturbance volumes are not anticipated to exceed the NES permitted activity criteria. Should larger scale works in these areas be proposed then we would recommend further intrusive investigation to assess potential consent requirements.

I hope this information is helpful and please let me know if you need further clarification.

Kind regards,

Michael Knopick, MSc

Hi Michael,

See enquiry from the Council re contamination and planting, can you comment about the planting disturbance in the contaminated areas.
